

TRACE LABS OSINT TRAINING REPORT

Case File: TL-2026-001

Investigation Title	Streamer Geolocation
Platform	Trace Labs
Category	Geolocation (GEOINT)
Classification	Training Exercise
Status	Completed

Executive Summary

This investigation focused on identifying the city shown in a still image captured from a fictional livestream. A reverse image search using Google Images led to the identification of County Hall, allowing the location to be confirmed as London, England.

Scenario

A livestream unexpectedly disconnected. The objective was to determine the streamer's location using only the provided image.

Investigation Objective

Identify the city shown in the supplied image using publicly available OSINT techniques.

Evidence Provided

- One still image from the fictional livestream.
- No metadata or additional context.

Methodology

The supplied image was visually reviewed before conducting a reverse image search with Google Images. Matching imagery was used to identify the landmark and determine the city.

Investigation Process

Initial Observation: The image depicted a dense urban environment with distinctive architecture.

Research: Google Images identified the landmark as County Hall.

Verification: The landmark was compared with publicly available imagery to confirm the location.

Findings

Landmark: County Hall

City: London, England, United Kingdom

Confidence Assessment

High

Tools Used

Google Images

Skills Demonstrated

- Reverse Image Searching
- Landmark Identification
- Geolocation (GEOINT)
- OSINT Documentation

Lessons Learned

Recognizable landmarks and reverse image searching can provide an efficient starting point for geolocation investigations when distinctive architecture is visible.

Ethical Statement

This investigation was completed as part of a fictional Trace Labs OSINT training exercise using only publicly available information.
